G NISHANTH

Agentic AI Automation Test Engineer

Bengaluru, Karnataka | +91 78994 08398 | nishanth6235@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Agentic AI Automation Test Engineer with 3+ years of experience in UI automation, API testing, backend validation, data migration testing, and AI-assisted quality engineering. Experienced in developing Playwright-Cucumber frameworks, testing Web, macOS, iOS, and iPadOS applications, validating REST APIs, and using SQL for source-to-target data checks. Uses Claude and Claude Code to support requirement analysis, test scenario generation, edge-case discovery, automation-code assistance, defect triage, root-cause analysis, and reporting. Applies agentic workflows to streamline repetitive testing tasks and validates AI-generated outputs against acceptance criteria and source data. Claude Certified Architect – Foundations.

TECHNICAL SKILLS

Agentic AI & Generative AI: Claude, Claude Code, agentic workflows, prompt engineering, AI-assisted development, AI-generated test scenarios, LLM testing concepts, RAG, DeepEval, hallucination testing, response-quality evaluation, AI output validation

Automation Frameworks: Playwright, Cucumber/BDD, Java, Selenium WebDriver, XCUI, Swift, Karate, Page Object Model (POM), reusable components, data-driven testing, dynamic locators, parallel execution

API & Services Testing: Postman, REST Assured, Swagger, Bruno, Charles Proxy, REST APIs, SOAP, JSON, XML, authentication, request/response validation, service contracts

Programming & Data: Java, Python, JavaScript, SQL, data migration testing, ETL verification, source-to-target mapping, row-count reconciliation, field-level comparisons, null/duplicate checks, referential integrity

Testing & Quality Engineering: Functional, regression, smoke, sanity, UAT, exploratory, integration, end-to-end, compatibility, negative/boundary testing, OS certification, release validation, defect triage, root-cause analysis

DevOps & Methods: Jenkins, GitHub Actions, Bitbucket, Git, Jira, Radar, Allure Reports, Maven, CI/CD, Agile, Scrum, SDLC, STLC, BDD, TDD

Platforms & Development: Web, iOS, macOS, iPadOS, React, Vite, REST APIs, Docker, Render

PROFESSIONAL EXPERIENCE

Cognizant Technology Solutions — Apple Account
Agentic AI Automation Test Engineer | Dec 2023 – Present | Bengaluru

- Designed and maintained Java-based Playwright-Cucumber automation using the Page Object Model (POM), with Selenium WebDriver experience supporting UI automation, reusable utilities, dynamic locators, and data-driven test coverage.
- Executed functional, regression, smoke, sanity, UAT, exploratory, integration, end-to-end, compatibility, localization, accessibility, and release-validation testing across Web, macOS, iOS, and iPadOS applications.
- Analyzed user stories, acceptance criteria, dependencies, business rules, and workflows; designed positive, negative, boundary-value, and error-handling scenarios.
- Used Claude, Claude Code, and other Generative AI tools to break down requirements, applied prompt engineering, generated test scenarios, improved Java/Python automation code, troubleshot failures, and validated AI output for accuracy.
- Applied agentic workflows using Claude Code and Sherlock Agent to assist with defect triage, duplicate-defect analysis, execution reporting, and root-cause investigation, with human verification of findings.
- Performed API testing with Postman, REST Assured, Swagger, Bruno, and Charles Proxy, validating authentication, status codes, request/response payloads, backend integrations, and service contracts.
- Wrote and optimized SQL queries for backend verification and data migration testing, including source-to-target row counts, field-level comparisons, transformation checks, null/duplicate checks, and referential integrity.
- Supported AI Engineer and Generative AI quality initiatives by assessing Large Language Model (LLM) outputs and RAG-related responses; maintained familiarity with LangChain, vector database concepts, and DeepEval for response-quality, groundedness, and hallucination evaluation.
- Used AI-assisted SQL authoring and dashboard generation to report migration coverage, reconciliation status, and defect trends; verified generated queries and results against source data.
- Developed and maintained XCUI automation using Swift for supported Apple-platform workflows and investigated failures across UI, API, and backend layers.
- Integrated and executed automation suites through Git-based workflows and Jenkins, GitHub Actions, and Bitbucket CI/CD pipelines; work within Agile/Scrum teams and used Allure reports to communicate execution results and release risks.
- Collaborated with developers, product owners, data engineering teams, and release stakeholders in Agile/Scrum to investigate defects, verify fixes, conduct regression testing, and support release readiness.
- Improved framework stability by reviewing failed executions, identifying flaky or environment-dependent behavior, maintaining reusable test components, and updating scripts as workflows change.

PROJECT EXPERIENCE

Atlas — Learning Management System (LMS) | Client: Apple
Atlas is a Learning Management System (LMS) for the Apple account. Quality engineering focuses on validating learning workflows, application behavior, API integrations, and release readiness across supported Apple platforms.

- Developed and maintained automated test coverage for key LMS workflows using Playwright-Cucumber and reusable framework components.

- Translated user stories and acceptance criteria into test scenarios, including positive, negative, boundary, and error-handling cases.
- Executed end-to-end, functional, regression, smoke, sanity, integration, and exploratory tests to identify workflow and usability defects.
- Validate API behavior, authentication, request/response payloads, and backend integrations using Postman and REST Assured.
- Used SQL and backend checks to investigate data inconsistencies and confirm expected application behavior where database access is available.
- Used Claude and prompt engineering to turn requirements into AI-generated test scenarios, uncover edge cases, and support script improvement and failure analysis; validated AI output against acceptance criteria.
- Applied Claude Code and agentic workflows to streamline repetitive test-engineering tasks, support defect analysis, and prepare execution summaries, reviewing recommendations before use.
- Documented reproducible defects, provided execution evidence, retested fixes, and ran targeted regression suites; assessed AI-assisted findings for relevance and response quality before using them in release decisions.

PERSONAL PROJECT

IOCF — International Online Cricket Federation | Web & Mobile App | iocf-official.vercel.app
Independent project built with AI-assisted development: the official site and Android/iOS app of a 26-board online cricket federation, covering boards, chairmen, players, umpires, franchise leagues, major tournaments, rankings, and games, all driven by a single Google Sheet.

- Built the front end with React, TypeScript, Vite, Tailwind CSS, and Framer Motion, organised into separate profiles (Main, Chairman, Board, Player, Umpire, Franchise Leagues, Major Tournaments, Rankings) with global search and favourites.
- Built a Google Sheets sync pipeline in Node.js that turns the sheet into the app dataset; the live site loads data from a Vercel serverless API, then a JSON file, then a bundled offline snapshot, and keeps the last good data if a sync fails.
- Generated player statistics for franchise leagues and major tournaments from scorer CSV exports; computed rankings (board, batting, bowling, fielding, awards) from live data so they stay current.
- Implemented a locked Command Center with 27 server-side accounts (1 administrator, 26 board chairmen) backed by Supabase, with an administrator dashboard and a themed dashboard per board.
- Added six data-driven games (Digit Cricket, Guess the Player, Daily Quiz, Head-to-Head Duel, Higher or Lower, share cards) and packaged the web app for Android and iOS with Capacitor.
- Deployed on Vercel (also containerised with Docker for Fly.io); validated AI-generated code and data transformations against the source sheet before release.

AGENTIC AI & AI-ASSISTED QUALITY ENGINEERING

- Used Claude and Claude Code as AI-assisted engineering tools for requirement analysis, test design, automation script support, SQL drafting, troubleshooting, and technical documentation.
- Refined prompts to generate test scenarios from user stories and acceptance criteria, covering positive, negative, boundary, exception, and edge-case behavior.
- Applied agentic workflows with Claude Code and Sherlock Agent to assist with repeatable QA tasks such as duplicate-defect analysis, failure investigation, and execution reporting.
- Review AI-generated test cases, scripts, SQL queries, and defect summaries for correctness, relevance, and consistency with requirements before use.
- Used AI-assisted SQL generation to accelerate multi-table validation, row-count reconciliation, field-level comparison, and data-integrity checks.
- Created AI-generated dashboards to summarize migration test coverage, reconciliation status, and defect trends for faster stakeholder visibility.
- Applied human-in-the-loop validation to reduce the risk of accepting fabricated, incomplete, or incorrect AI-generated findings.
- Built working familiarity with Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), LangChain, vector databases, and DeepEval; explored LLM response-quality evaluation, groundedness, and hallucination checks without treating conceptual exposure as production implementation.

EDUCATION

Master of Computer Applications (MCA) | RNS Institute of Technology, Bengaluru | 2021–2023

CERTIFICATION & RECOGNITION

- Claude Certified Architect – Foundations | Anthropic
- Rising Star Award – QA Automation Excellence at Cognizant
- Tek Knight Award (ReCog Nurize 2.0) – Best Trainee Performance Recognition
